

P&H ERECTORS INC.

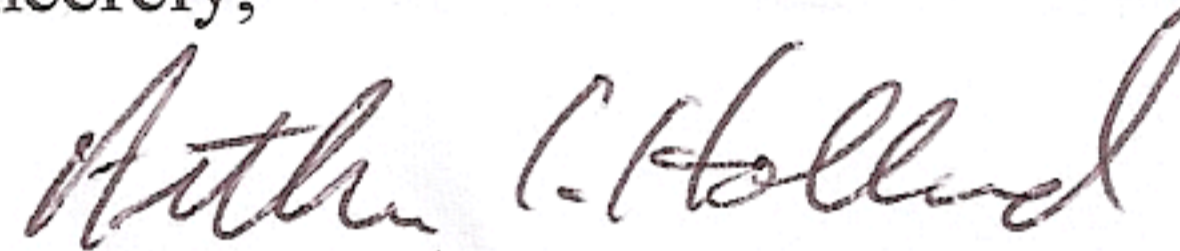

September 22, 2009

To Whom It May Concern,

I have had the opportunity to install over 300 Universal Flex Frames in the Florida area. We have experienced no problems with the installation to include fitting up in the field. The installation is very simple, having only to us one ¾" wrench and back-up to get the frame completely together resulting in a much quicker assembly. The frame has a self-aligning connection, so it is always square when you are finished.

Of all the different brand frames available and we have installed most all of them, in my opinion the Universal Flex Frame is the strongest, most durable, and easiest to wrap a flex around frame on the market. I highly recommend this frame to anyone in the industry looking for a quality product that will enhance their billboards.

Sincerely,

Arthur Holland
Vice President
