

Sun Media

August 27, 2009

I have installed 200 + Sun Media Frames in the Houston and surrounding areas over the past year. Very easy installation and 95 % of them were installed without a crane. The frame can be installed in 2 ½ hours including the installation of the vinyl. There is no specific stringer displacement needed.

If the frames are built on the ground and a crane is used to install them, no spreader bar will be needed because of the strength of the frame.

They are 100% galvanized and if you see one it speaks for itself.
